

Berry's "All-Star" Line-Up

This Super Bowl season, our Berry College girls "Pack"-a-punch and plan to "Steel" the show!

Draft These New "Starters" For Your First-Round Pick!

Berry's Blitzen Bristol is the amazing result of Berry's Impuls Hannah and Barham's Maximus Blitzen (147JE06183). She has been a promising "All-Star" from the beginning. Brad Barham of Barham dairy in Calhoun, TN proclaims her as, "the highest genomic proven Blitzen daughter on the planet!" This girl is raring to go and ready to bring her "A-game".

Berry's Fantom Pandora, a daughter of Berry's Blackstone Faith and Altamont MH Fantom(7JE762), carries on the high JPI and exceptional genetics of her family before her. She has recently been genomically tested and the results show her true potential. She is one of the best Berry has to offer and is looking to knock out the competition!

Meet Our Seasoned "All-Stars!"

Berry's Matinee Rhapsody is one of the finest uddered Matinee daughters at the Berry College dairy. Herby Lutz, Select Sires analyst, had this to say about this cow's promising future: "When I find a Matinee this good, we want to work with her. We are very excited." Select Sires has currently contracted for a first choice bull.

Berry's Impuls Hannah is a superstar with superior genetics that trace back to her granddam, Berry's Paramount Mindy Two. She is tall, sturdy, and trouble-free. Not to mention she was graced with an out-of-this-world udder.

Berry's Legacy Snow-ET is the granddaughter of Berry's Parade Medley, who is classified as having excellent dairy form. She has solid genetics and is still in her prime. She has been flushed twice, the second time being this February.

Get Your Head In The Game!!

Berry's Brazo Century stands out in our herd not only because of her unique color, but her overall excellence. She has wonderful confirmation and form and is also from a unique bloodline, making her a great genetic contributor. She now has a number of progeny with five heifers and three bulls on the ground. She also has several embryos in our tank and six were recently sent to Jamaica for implantation of a registered Jersey herd.
